A WORD OF WELCOME

In 2019, labor shortages will likely be our biggest challenge. Innovation will be the key to facing this major, long-lasting issue while continuing to improve the maple syrup we produce.

At CDL, we believe that automation, powerful equipment and a remote monitoring system are part of the long-term solution for all maple sugar producers. This idea is the foundation of our 4.0 system.

Maple sugaring needs to be appealing to youth so that we can draw them to our incredible sector. Young workers are the best way to advance and evolve our industry so it can reach its fullest potential. There are a number of opportunities on the horizon.

Innovative products will soon be added to complement maple syrup. They will add a whole new dimension to maple sugaring and present even greater opportunities. That's why it's important to be prepared.

The CDL family wants to thank you for trusting us for so many years. We wish you an excellent 2019 season.

See you soon!

On behalf of everyone at CDL,

Martin Chabot, co-owner

Signature SPOUTS

CDL along with customers have worked hard over the years to create the best spouts available in the industry.

We think CDL Signature Spouts are the perfect choice for your sugarbush. Here's why:

MINIMUM RESTRICTION

The 45° angle facilitates sap flow and prevents residue or unwanted bacteria from accumulating.

NEW

Our new signature spouts are made with a UV coating and come with 2 Maxflow barbs for a better grip on tubing.

NEW

PERFECT SEAL

The thin wall works with the perfect taper to create a completely airtight seal.

LONGER SPOUT WORKS BETTER ON THICK BARK.

DID YOU KNOW?

It's been proven that a smaller tap hole doesn't affect the volume of sap collected under vacuum. Keep your maple trees healthy over the years.

Spouts available in 5/16" and 1/4" sizes and many colors for better tapping control in the woods.

3/16" FITTINGS AND TUBING

3/16" gravity tubing

Ideal for sugarbushes without electricity and maple producers who do not want to use a mechanical system for vacuum.

- > Increases production
- > Creates a vacuum without a pump
- > Better sap quality than standard gravity system
- > As simple as using buckets, but with less work and better performance

MAXFLOW FITTINGS

The new line of **5/16" Maxflow fittings** was specifically designed and developed for maple producers wanting to operate over 25 in-hg (high vacuum). These fittings enable a perfect seal with a vacuum level **beyond 25 in-hg** and offers the following advantages:

- **No parting lines on the first barb.**
- Precision moulding.
- Eliminates micro-leaks caused by molding lines.
- Better grip on the tubing.

**White spouts,
7% better performance**

Did you know?

**ACCORDING TO A STUDY
FROM THE ACER CENTER**

When comparing sap yield, the white Maxflow spout gave a **sap volume 7% higher** than the black Maxflow spout.

CONCLUSION OF THE STUDY

In the studied sugarbush, white spouts gave a higher volume of sap compared to the black spouts.

This increase, recorded in the last part of the season, would be related to the color of the spout and its thermal absorption properties.
